Brilliant[®] Black Tainer

The Brilliant® Black Tainer outshines them all!

The Brilliant® Black Tainer, utilised for the storage of dry ice and many other cold products, not only looks better but is stronger and longer lasting than all its predecessors - or its competition - and has numerous benefits for all who will use it.

What makes it so great?

Made of expanded polypropylene or EPP, which is plastic made from propylene gas in the presence of a catalyst, the Brilliant® Black Tainer is remarkably resilient, durable, lightweight, chemically inert, recyclable **and has amazing insulation properties!**

Who's it for?

Because of its outstanding insulation properties, the Brilliant® Black Tainer (with a 20 kg capacity) is ideal for the portable storage of medical supplies, food and other applications that require effective thermal protection, which is especially beneficial to all manufacturers, retailers and hospitality outlets that utilise dry ice!

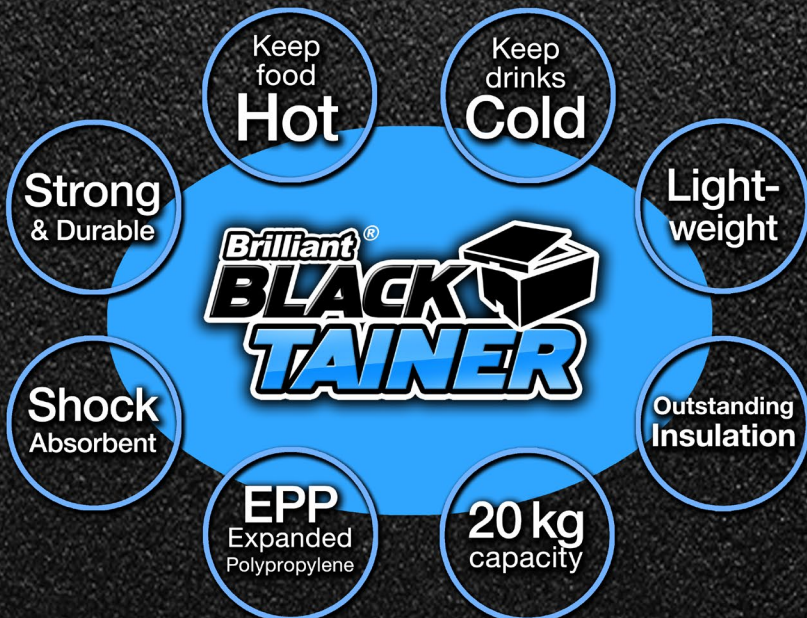

Benefits of the Brilliant® Black Tainer

The benefits of expanded polypropylene (EPP) containers are numerous and impressive, including:

- EPP is more robust and energy absorbent than other plastics, therefore the Brilliant® Black Tainer is ideal for both moulded and fabricated packaging.
- EPP has an exceptional strength-to-weight ratio, therefore the Brilliant® Black Tainer is super lightweight.
- Polypropylene is an extremely resilient material, which results in the box lasting longer, therefore the black exterior masks staining and wear.
- Being highly energy absorbent, EPP is considered a tough material option, therefore the Brilliant® Black Tainer is stronger, more shock absorbent and durable than its counterparts.
- EPP is unaffected by most chemicals, oil and petroleum.
- EPP is suitable for storage of electronic components.

EPP gives the Brilliant® Black Tainer it's amazing insulation properties, which is the ideal cold storage box for everyone and used in many applications.

Take the next step in cutting-edge, portable hot and cold storage technology – order your Brilliant® Black Tainer today!

HOW DO I STORE DRY ICE?

Use an insulated cooler, polystyrene container or order the perfect size on demand. Wrap the dry ice in paper or blanket to extend the life of the product if necessary. Do not store dry ice in your home freezer!

WHAT ABOUT SAFETY?

Dry ice is not for human consumption. Handle only with protective gloves or mitts. Transport only in complete isolation from the driver. Do not place dry ice in any gas-tight container - it sublimates and expands! Keep away from children (adult supervision is required).

WHAT IS DRY ICE?

Dry ice is frozen carbon dioxide (CO₂) at a temperature of -79 °C. It is a non-toxic, non-flammable and food-grade product, which sublimates directly from a solid to a gas resulting in no liquid/water remaining behind. Sublimation of dry ice creates the cooling effect, of which the energy value is 570 kJ/kg.

DELIVERY

Dry Ice International delivers countrywide on a 24-48 hour basis. Dry ice may be ordered on the website to be delivered at your doorstep, or collected at any of our retail outlets.

MORE ABOUT US

Dry Ice International has been providing the South African industry with innovative dry ice technology and solutions since 1994. We are known for our dedicated national client service, creativity, innovation, as well as our team of highly qualified and experienced personnel.
